(57) Abstract :

A mobile application based corporate social responsibility system and method of working thereof comprising a computer system for sending and receiving request of NGOs and corporation registration and mobile applications, the system comprising a CPU, a computer readable memory and a computer readable storage media; first program instructions to retrieve independently developed mobile applications, which run on existing APIs of a mobile device. The mobile application based system (1) provides a contact point to various corporates and NGOs and addresses various causes of both of them by bringing both the stakeholders together. Each NGO would be verified, and their documents, certificates would also be verified, authenticity, work would be examined, then only they would be registered on the said mobile application. The mobile application-based system provides step by step analysis of the funding received, spent, and work progress to the stakeholders.
